This is a two step problem. The first step is to calculate the time it takes for the ball to reach the ground. To find this time, we use the following kinematic equation dealing with vertical motion. Choosing the ground to be the zero height, we

have and . Also, knowing that the initial vertical velocity is zero, we know that . Motion in Two Dimensions - AP Physics 1 PSI AP Physics C - Kinematics 2D Multiple Choice Questions 1. and down motion has nothing to do with the sideways motion and the sideways motion has no effect on the up and down motion. This is like a really important KEY CONCEPT! Assumptions: We are required to make a couple of assumptions here: 1. g has magnitude of 9.80 m/s^2 and is always downward. 2. Effect of air resistance can be ignored. 3. 4 - Projectile Scalar and Vector are just two of the many quantities used in physics. Scalar is a quantity that is totally described by magnitude or size, whereas, a vector quantity is specified by both magnitudes as well as direction. So, here in this quiz, we are going to ask you nineteen questions about the same, read them carefully and answer correctly. Quiz: Scalar And Vector Quantity In Physics - ProProfs Quiz AP physics C. physics you already know if we neglect air resistance.
Projectiles follow parabolic paths. Key to solving
projectile motion problems is analyzing the vertical and
horizontal components of the projectile's motion
separately.
