Channel coding is the digital means by which radio transmission frequencies are prevented from interfering with one another. This book describes the salient techniques by which this is achieved. Wiley-VCH - Channel Coding for Telecommunications The strategy of the channel encoder, on the other hand, is to add redundancy to the transmitted signal—in this case so that errors caused by noise during transmission can be corrected at the receiver. The process of encoding for protection against channel errors is called error-control coding. The purpose of channel coding theory is to find codes which transmit quickly, contain many valid code words and can correct or at least detect many errors. While not mutually exclusive, performance in these areas is a trade off. So, different codes are optimal for different applications. What is channel coding? Wireless communication systems depend on channel coding (sometimes called forward error correction) to ensure that the data received is the same as the data sent. Wireless links suffer from interference and fading which causes errors, so to overcome this the transmitter adds additional information before the data is sent. What is Channel Coding? | AccelerComm After source encoding, the digitized signal is processed in a channel encoder, which introduces redundant information

that allows errors to be detected and corrected. The encoded signal is made suitable for transmission by modulation onto a carrier wave and may be made part of a larger signal in a process known as multiplexing . telecommunication | Technology, Examples, Devices, & Facts ... A series of codes will specifically tell AT&T the type of channel and the technical interface (s) required by the Customer to meet their end-to-end needs. Carrier Coding Guides - 21 State - AT&T Prime Access Citation of Massey: "The purpose of the modulation system is to create a good discrete channel from the modulator input to the demodulator output, and the purpose of the coding system is to transmit the information bits reliably through this discrete channel at the highest practicable rate."
